

PRO-PICC^{CT}
CT RATED PICC CATHETER

IMPORTANT RISK INFORMATION

3F Pro-PICC[®]

Indications for Use: The 3F Pro-PICC[®] CT catheter is indicated for short term or long term peripheral access to the central venous system for intravenous therapy and power injection of contrast media, and allows for central venous pressure monitoring. The maximum recommended infusion rate varies by catheter French size and is printed on the catheter.

Contraindications: The presence of device related infection, bacteremia, or septicemia is known or suspected. The patient's body size is insufficient to accommodate the size of the implanted device. The patient is known or is suspected to be allergic to materials contained in the device. There has been past irradiation of prospective insertion site. There have been previous episodes of venous thrombosis or vascular surgical procedures at the prospective placement site. There are local tissue factors that may prevent proper device stabilization and/or access.

Pro-PICC[®]

Indications for Use: The Pro-PICC[®] CT catheter is indicated for short term or long term peripheral access to the central venous system for intravenous therapy and power injection of contrast media and allows for central venous pressure monitoring when a 20 gauge or larger lumen is used. For blood sampling, infusion or therapies use a 4F or larger catheter. The maximum recommended infusion rate varies by catheter French size and is printed on the catheter.
