VASCU-PICC°, VASCU-PICC° TL, & VASCU-PICC® TLS

Ranging in size from 1.9F to 5F, and available with tapered or non-tapered lumens, Medcomp's Vascu-PICC® line of catheters provides a full range of options designed to meet the unique access challenges of patients young and old. Consistent across all designs is a radiopaque polyurethane material, which softens within the body, therefore reducing mechanical trauma and irritation within the vein compared to harder materials.

Reduce bleeding at the venotomy site with our tapered design.

Featuring a taperless lumen, ideal for smaller vasculature.

FEATURES & BENEFITS Vascu-PICC®, Vascu-PICC® TL, & Vascu-PICC® TLS

Thermosensitive Material

Softens at body temperature.

Radiopaque Lumen

Identifiable under X-ray.

Depth Marks

Aids with catheter insertion to desired depth.

Polyurethane Material

Provides strength and high flow rates.

Non-Tapered Design*

Reduces the incidence of vessel occlusion in smaller vasculature.

*Non-tapered design applicable to Vascu-PICC® TL & Vascu-PICC® TLS only

Tapered Design*

Reduces bleeding at the venotomy site.

*Tapered design applicable to Vascu-PICC® only

IMPORTANT RISK INFORMATION

VASCU-PICC® & VASCU-PICC® TL

Indications for Use: The Peripherally Inserted Central Vein Access Catheters are designed for long or short-term peripheral access to the central venous system for intravenous therapy and blood sampling and allows for central venous pressure monitoring.

Contraindications: This catheter is not intended for any use other than that which is indicated. Do not implant catheter in thrombosed vessels. The presence of skin related problems around the insertion site (infection, phlebitis, scars, etc.). The presence of device related bacteremia or septicemia. History of mastectomy on insertion side. Previous history of venous/subclavian thrombosis or vascular surgical procedures at insertion site. Fever of unknown origin. The patient's body size is insufficient to accommodate the size of the implanted device. The patient is known or is suspected to be allergic to materials contained in the device. Past irradiation of prospective insertion site. Local tissue factors will prevent proper device stabilization and/or access.

1.9F VASCU-PICC® TLS

Indications for Use: The 1.9F Vascu-PICC® is a long-term catheter intended for central venous access via peripheral insertion in neonates, infants, and children. It may be used for administration of fluids, medication, and nutritional therapy.

Contraindications: This catheter is not intended for any use other than that which is indicated. Do not implant catheter in thrombosed vessels. The presence of skin related problems around the insertion site (infection, phlebitis, scars, etc.). The presence of device related bacteremia or septicemia. Previous history of venous/subclavian thrombosis or vascular surgical procedures at insertion site. Fever of unknown origin. The patient's body size is insufficient to accommodate the size of the implanted device. The patient is known or is suspected to be allergic to materials contained in the device. Past irradiation of prospective insertion site. Local tissue factors will prevent proper device stabilization and/or access.

2.6F VASCU-PICC® TLS

Indications for Use: The 2.6F Vascu-PICC* catheters are indicated for short or long term access to the central venous system via peripheral insertion in neonates, infants, and children. It may be used for administration of fluids, medication, and nutritional therapy.

Contraindications: This catheter is not intended for any use other than that which is indicated. Do not implant catheter in thrombosed vessels. The presence of skin related problems around the insertion site (infection, phlebitis, scars, etc.). The presence of device related bacteremia or septicemia. Previous history of venous/subclavian thrombosis or vascular surgical procedures at insertion site. Fever of unknown origin. The patient's body size is insufficient to accommodate the size of the implanted device. The patient is known or is suspected to be allergic to materials contained in the device. Past irradiation of prospective insertion site. Local tissue factors will prevent proper device stabilization and/or access.
